

**EQUIPMENT AND METHODS FOR PRODUCING CONTINUOUS
METALLIZED THERMOFORMABLE EMI SHIELDING MATERIAL**

ABSTRACT OF THE DISCLOSURE

The present invention provides in-line equipment and methods for manufacturing an EMI/RFI shield that is integrated formed in a formable sheet. The EMI/RFI shield may comprise a shaped thermoform shell that has one or more conductive layers applied to one or more surfaces. The EMI/RFI shield may be integrally formed with the formable sheet via attachment tabs that are positioned along one or more edges of the EMI/RFI shield.
